

## **1. INTRODUCTION**

The Hotel Industry like any other business opens up socio-Economic opportunities for both owner and customer. Customers are mostly constrained in trying to get a room to pass the night, as the usual practice is to look for a hotel when you have arrived In the particular location, walk in and find out whether there is a vacant room. In the case that there is no vacant Room, you have to move to next closest hotel to enquire once more. There is no system in place that bonds the hotel and the Customer that the customer has actually booked a room and for that matter he is guaranteed a room.

A typical luxury Hotel requires a management system to control its various operations such as maintaining account of all the people in its domain of services, attending to various needs of customers and also archieving increased efficiency in the overall working of the Hotel itself.

### 2.OBJECTIVES

- **Access anywhere:** The online hotel reservation project can be reached at any time and anywhere from the world with great efficiency.
- **Easy booking:** The rooms in the particular hotel can be reserved easily through this site with great expertise.
- **Room availability:** The rooms that are open in the particular hotel must be refreshed in real time.
- **Category:** The hotels can be classified based on the appropriate region of your preference.
- **Price:** The price or rent of the appropriate rooms in the appropriate hotel in the chosen section will also be updated.
- **Payment options:** The clients will be having the option of paying the rent of the hotels through the online mode without any difficulty.

### **3.LITERATURE SURVEY**

#### **Tools and Technology**

According to Tim Berners-Lee (1998), HTML which stands for Hypertext Markup Language is the predominant Markup language for web pages, a building block of web Pages. A web browser reads HTML documents and Compose them into visual or audio web pages (lamp.cse.fau.edu). The browser does not display the HTML tags but uses the tags to interpret the content of the Page ([www.w3schools.com](http://www.w3schools.com))

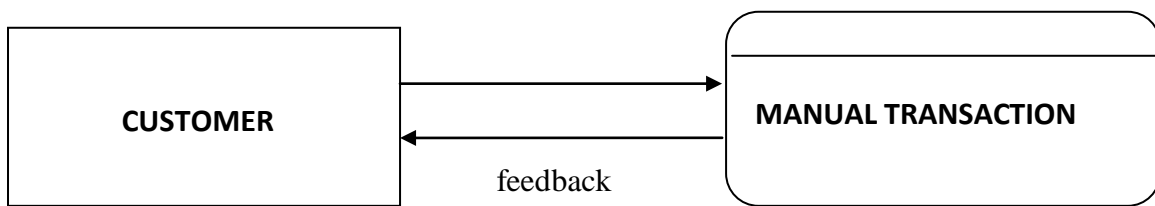

Web browsers can also refer to Cascading Style Sheets(CSS) to define the appearance and layout of text and other(lamp.cse.fau.edu). According to Tim Berners-Lee (1998), HTML which and retrieval of data in a database management system javascript is an implementation of the ECMA script browser in order to enhance user interfaces and dynamic client-side javascript, implemented as part of a web compose them into visual or audio web pages designed for web development to produce dynamic web browsers can also refer to Cascading Style Sheets Editing system files that are to be used in a DOS or html environment (533507.weebly.com). Notepad supports both for managing data in RDMS and originally based onhp is a general-purpose scripting language originally html source document, a building block of web materials (Taylor, 2013). The W3C, maintainer of both no format tags or styles, making the program suitable for notepad is a common text-only (plain text) editor. The often referred to as Structured Query Language, designed over explicitly presentational HTML markup.A web browser reads HTML documents and pages. For this purpose, PHP code is embedded into the relational algebra and calculus (Ghosh, 2010).Resulting files typically saved with the .txt extension have SQL is a computer language designed for the management stands for Hypertext Markup Language is the predominant websites (mcfarland, 2008). This enables programmatic with a PHP processor module, which generates the web`

### 3.1 Existing System

The Hotel currently runs a manual booking system and therefore requires customers to only book for rooms or any other service by walking to the receptionist or calling them on phone or using a third party option. Any enquiry to be made demanding feedback must usually be forwarded to The hotel in person. Sometimes management is given false Reports concerning the work flow of the hotel and Employees also give falsified pricing information to Customers from time to time. From an employee's account, details of customers are hardly used in the workflow and that also, records are not Properly kept; books used to keep records are disposed of when they get filled up. Niyaz Hotel hardly advertises And depends on word of mouth adverts by some loyal Customers in and around its vicinity

(Context Diagram)

## 4.SYSTEM ARCHITECTURE

### 4.1 Proposed System

The proposed system is a web based application that allows customers to make enquiries online and book for services providing the required details. It adopts the virtual tour feature that was seen in the Niyaz Hotel in Belagavi.

The following are solutions the proposed system brings on Board:

- Well laid out information about Niyaz hotel.
- The manual booking system is replaced with an online reservation system.
- Management can pull reports at anytime to tell the current situation in order to put The necessary measures in place.
- The system helps secure customer Information since no information is disposed off.

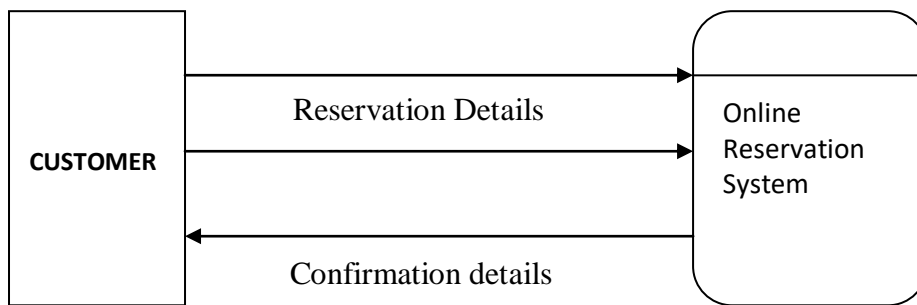

A customer surfs through any of the items of the proposed system. An about us page is designed to allow customers get all necessary information about the hotel and its Facilities. A

## SELF STUDY

---

contact us page is provided where customers can send emails. More importantly, customers can make reservations at their own pace. This study has been categorized into four groups:

- System monitoring done by system administrator
- Filling forms to make enquiries and reservations
- Approving or deleting enquiries
- Virtual Tour

(Context Diagram of proposed System)

### **4.2 Hardware and Software Requirements**

#### **Software**

- Windows 10 OS
- Intel pentium processor
- Notepad++

#### **Languages are used**

- CSS
- HTML
- JAVA SCRIPT

#### **Hardware**

- Hard Disk:- 15GB
- RAM:- 1GB
